Solid State Logic | Leading the way in Sound
Also known as Mixing Board, Mixing Console, or Sound Board, a mixer is a very versatile component that can be used from live shows to studio recordings. At its very core, a mixer takes audio signals and mixes them together sending them to one or more Output channels, making them, if done correctly, sound as intended.

Difference between an Audio Interface and a Mixer! - The ...
An audio interface is specifically designed to take the sounds from your live audio sources and send them to your computer for playback or recording — and unlike the built-in 3.5mm microphone jack or sound card on your computer, it actually preserves the quality of the sounds, which is essential if you want professional-sounding audio.

The Soundcraft EPM Series provides a straight-forward, yet professional alternative to complex audio mixers. Constructed in a 6-, 8- or 12-channel chassis, the EPM mixers are well-suited for recording and sound reinforcement applications. The EPM 8 features 8 mono and 2 stereo input channels providing the flexibility needed to accommodate the recording studio, venue or touring musician.

Soundcraft EPM 8 - 8 Mono + 2 Stereo Audio Console ...
Secondly, you can go mixerless applying an audio interface and create the computer sequencer your center, where the sound goes for mixing audio tracks and plugins. Surely the approach needs the least amount of gear and cost. It is a simple way to get started. The third step is using multi-track recorders, where a digital mixture is applied.
