This book attempts to provide we general physicians with a conveniently sized work for daily reference. It deals with an area of medical practice which is rapidly changing. For that reason regular updating with new material will need to be considered. The book does not profess to be encyclopaedic. In order to keep the size of the book within bounds. there are no sections devoted solely to psychological medicine or to paediatrics. but the book does deal with the more common diseases as revealed by morbidity studies. The main section of the book-A-is concerned with these commoner diseases and is set out in conventional fashion. It is in two parts; the one dealing with therapeutics. the other with clinical pharmacology. The second section-B-reviews therapy in some selected areas. Cancer. pain and terminal care. contraception. and hyperlipoproteinaemias. It also contains pieces on common emergencies. home renal dialysis and tropical diseases in non-tropical countries. The creation of 'pain clinics'. and the possibilities for the treatment of intractable pain are innovations calculated to be more widely used as we become more aware of their value. The field of rehabilitation is one of which we general physicians are on less familiar ground. To say that by us it is a neglected field is perhaps not too strong a statement. The section on Drugs concentrates on the practical side of drug administration and hence the stress is on the incompatibilities. side effects and contraindications.

Joseph L. Wetchler provide an essential overview of infidelity theory, research, and treatment. They discuss the effect of infidelity on couples and delineate three types of infidelity—emotional, physical, and infidelity including aspects of both. They review the relatively new role of the Internet in infidelity and explore infidelity within the context of comarital relationships. Finally, they discuss the overarching theories and common models used in infidelity treatment. Also in the Handbook of the Clinical Treatment of Infidelity: Susan M. Johnson, the co-developer of Emotionally Focused Therapy (EFT), discusses affairs through the lens of attachment theory, and shows how EFT provides a way to acknowledge and express pain, remorse, and regret, and to repair this attachment bond. David Moultrup takes a Bowenian approach to infidelity, focusing attention on the underlying dynamics of the emotional system Frank Pittman and Tina Pittman Wagers outline cultural myths about affairs and do their share of debunking Adrian Blow discusses how to help couples directly address their pain—and the challenges of the healing process Brian Case highlights the role of apology and forgiveness in the healing process Frank Stalfa and Catherine Hastings focus on the treatment of “accusatory suffering”—a spouse’s obsessive holding onto and retaliating for an affair long after it has ended, and despite the offending partner’s repeated apologies and attempts at restitution Don-David Lusterman discusses individuals who have suppressed or denied traumatic stress reactions to their partner’s affair, and how to help them Scott Johnson discusses myths about affairs, from who is cheating on whom, to whether men really have more affairs than women, to the blame-filled language of “affairs,” “betrayal,” and “infidelity,” asking us to think more systematically about affairs and to see the dynamics of extra dyadic relationships as more complex and nuanced than they are typically portrayed in the literature Joan Atwood provides an overview of Internet infidelity—the factors influencing one’s involvement in this type of infidelity, and some considerations for therapists Tim Nelson, Fred Piercy, and Doug Sprenkle report on the results of a multi-phase Delphi study that explored what infidelity experts say are the critical issues, interventions, and gender differences in the treatment of Internet infidelity Monica Whitty and Adrian Carr draw upon Klein’s object relations theory and discuss how this might influence the way people rationalize their Internet infidelity Emily Brown outlines the concept of the Split Self Affair—discussing its origins, characteristics, and implications for individuals and couples, and providing detailed information on how to work with these couples in therapy Michael Bettinger presents extra dyadic relationship as a fact, rather than a problem, within many gay male relationships—a discussion that shows how gay male polyamory can work as an alternative to the heterosexual model of emotional and sexual exclusivity in romantic dyadic relationships Katherine Hertlein and Gary Skaggs report on the results of a study that assessed the level of differentiation and one’s engagement in extra dyadic relationships The Handbook of the Clinical Treatment of Infidelity is essential reading for today’s (and tomorrow’s) clinicians who work with couples. Davey University of Sussex, UK * A complete summary of current knowledge about phobias, for the academic and clinician * First comprehensive handbook on the topic for 10 years * The latest research and findings presented in a single source * Contributions from eminent international clinicians and researchers Psychological treatments available for specific phobias have been refined considerably in recent years. The Handbook also reflects the important role of cognitive factors in psychopathology which generate and maintain phobic disorders, a process that is now recognized as important in their understanding and treatment. "The joy of Davey's book is that it skillfully blends the historical conditioning theory perspective with current cognitive-behaviour theories . the result is a complete summary of current knowledge about phobias, for clinicians and researchers . an invaluable handbook and an essential summary of the status of theory, research and treatment in phobias.
