Environmental Chemistry Fifth Edition | ©2012 Colin Baird; Michael Cann. Format: Packages; Study Extras; E-book from \$64.99. ISBN:9781464129001. Access (6 months) \$64.99 Buy. \$151.99 ... *Colin Baird is Professor of Chemistry at the University of Western Ontario. He has received the University's Edward G. Pleva Teaching Award and a national ...*

Environmental Chemistry 5th Edition | *Colin Baird ...*

With an updated and balanced coverage of soil, water and air chemistry, the fifth edition pays close attention to the environmental impacts of chemical production and experimentation. A textbook that stands out from others looking at environmental chemistry as it makes these environmental problems accessible to students.

Environmental Chemistry | *Colin Baird, Michael Cann* | *download*

Hazardous waste. Air Pollution. These and other environmental topics are being discussed and debated more vigorously than ever. *Colin Baird and Michael Cann's Environmental Chemistry* is the only textbook that explores the chemical processes and properties underlying these crucial issues at an accessible, introductory level.

Chem20204 Environmental Chemistry

This textbook is geared to an audience that has only completed general chemistry. Many examples of complicated material, explained in easy-to-understand language, are sprinkled throughout the book. The authors do a thorough, nonjudgmental job of explaining how humans impact the environment and what steps if any have been taken to remedy problems.

Environmental Chemistry 5, Baird, Colin, Cann, Michael ...

Colin Baird and Michael Cann's Environmental Chemistry is the only textbook that explores the chemical processes and properties underlying these crucial issues at an accessible, introductory level. With authoritative coverage that balances soil, water, and air chemistry, the new edition again focuses on the environmental impacts of chemical production and experimentation, offering additional "green chemistry" sections and new case studies, plus

updated coverage of energy production (especially biofuels), the generation and disposal of CO2, and innovative ways to combat climate change.

This guide to environmental chemistry covers major topical issues, including the greenhouse effect, the ozone layer, pesticides, and air and water pollution. The text offers an active problem-solving approach, with exercises incorporated throughout each chapter.

"The signature undertaking of the Twenty-Second Edition was clarifying the QC practices necessary to perform the methods in this manual. Section in Part 1000 were rewritten, and detailed QC sections were added in Parts 2000 through 7000. These changes are a direct and necessary result of the mandate to stay abreast of regulatory requirements and a policy intended to clarify the QC steps considered to be an integral part of each test method. Additional QC steps were added to almost half of the sections."--Pref. p. iv.

Planet Earth : rocks, life, and history -- The Earth's atmosphere -- Global warming and climate change -- Chemistry of the troposphere -- Chemistry of the stratosphere -- Analysis of air and air pollutants -- Water resources -- Water pollution and water treatment -- Analysis of water and wastewater -- Fossil fuels : our major source of energy -- Nuclear power -- Energy sources for the future -- Inorganic metals in the environment -- Organic chemicals in the environment -- Insecticides, herbicides, and insect control -- Toxicology -- Asbestos -- The disposal of dangerous wastes.

Organic chemistry has played a vital role in the development of diverse molecules which are used in medicines, agrochemicals and polymers. Most of the chemicals are produced on an industrial scale. The industrial houses adopt a synthesis for a particular molecule which should be cost-effective. No attention is paid to avoid the release of harmful chemicals in the atmosphere, land and sea. During the past decade special emphasis has been made towards green synthesis which circumvents the above problems. Prof. V. K. Ahluwalia and Dr. M. Kidwai have made a sincere effort in this direction. This book discusses the basic principles of green chemistry incorporating the use of green reagents, green catalysis, phase transfer catalysis, green synthesis using microwaves, ultrasound and biocatalysis in detail. Special emphasis is given to liquid phase reactions and organic synthesis in the solid phase. I must congratulate both the authors for their pioneering efforts to write this book. Careful selection of various topics in the book will serve the rightful purpose for the chemistry community and the industrial houses at all levels. PROF. JAVED IQBAL, PHD, FNA Distinguished Research Scientist & Head Discovery Research Dr. Reddy's Laboratories Ltd.

This Book Has Been Thoroughly Revised And Updated In Its Present Sixth Edition, Striking A Neat Balance Between Environmental Chemistry And Environmental Chemical Analysis, The Book Explains The Various Dimensions Of Environmental Chemistry Including Latest Concepts And Developments In The Subject With Global And User-Friendly Approach. Notable Additions/Features In The New Edition Are: * New Chapter 5 On Environmental Biochemistry. * Separate Chapter 10 On Waste Treatment And Recycling After Recasting From Chapters 4 And 9. * New Sub-Section (1.1) (Chapter1) On The Dawn Of The Universe And Of Time, Setting A New Tone To The Book. * Carbon Cycle. * Latest Natural Disasters Tsunami, Hurricane Katrina. * Latest About Antarctica And Gangotri Glacier.With All These Inputs, This Book Will Scale New Heights Of Popularity In The Academic Community Comprising B.Sc. And M.Sc. Students Of Chemistry And Biochemistry As Well As Teachers In The Respective Subject. As Before, Scientists, Engineers And Researchers Will Find It A Valuable Reference Source In Their Profession.

This is a comprehensive textbook for upper level undergraduates which discusses the nature of heterogeneous systems in the natural environment. The links between and within the various environmental compartments - air, water, soil - are emphasized. The book describes the chemistry of natural systems, their composition and the processes and reactions that operate within and between the various compartments. Without focusing specifically on pollution, it also discusses ways in which these systems respond to perturbations, either those that are natural or those that are caused by humans. Background material from subjects such as atmospheric science, limnology, and soil science is provided in order to establish a setting for a description of the relevant chemistry. Emphasis is on general principles that can be applied in a variety of circumstances. At the same time, these principles are illustrated with examples taken from around the world. Because of issues of the environment related to every society, care has been taken to relate the subject material to situations in urban and rural areas in both highly industrialized and low-income countries.
