Factors influencing adoption of eHealth technologies in ...

Shared autonomous vehicles (SAVs), which have several potential benefits, are an emerging innovative technology in the market. However, the successful operation of SAVs largely depends on the extent of travellers' intention to adopt them. This study aims to analyse the factors that influence the adoption of SAVs by integrating two theoretical perspectives: the unified theory of acceptance ...

Where To Download Factors Influencing The Adoption Of E Services In Malaysia

The goal of this research was to identify the factors affecting scientists' adoption of open access publishing and to examine the extent to which these factors influenced the adoption. As an innovative way to disseminate scholarly information, open access journals offer many benefits that would have been impossible in traditional scholarly journals. Despite the increasing popularity, research-oriented publications have been few on the topic of open access, and there has been a lack of understanding of the adoption of open access publishing, which is becoming a hindrance to effective promotion and evaluation of open access journals. Drawing upon Everett Rogers' diffusion of innovation theory and Icek Ajzen's theory of planned behavior, this research examined (1) the factors influencing scientists' intention to publish in open access journals, (2) the measurement scale for each factor, and (3) the relative importance of these factors. To ensure the reliability and validity of survey instrument, this research conducted an elicitation study that comprised pilot interviews, content analysis, operationalization, and evaluation of initial items. A total of 1,104 scientists responded to a Web-based survey. The data analysis identified eleven factors and found that six attitudinal, two perceived control factors and one demographic factor out of the eleven significantly influenced the intention of open access publishing. The social influence and perceived topical compatibility factors appeared to be insignificant for the adoption. The influence of these factors, however, varied among the groups with different tenure status. Prior experience with and knowledge of open access publishing was a significant factor to motivate scientists to adopt open access publishing in general, but the perceived benefit of being visible was considered more important by tenured scientists than by untenured and not-applicable scientists. The untenured and not-applicable groups perceived the benefits of career matters as a more important factor. The findings of this research contribute to our understanding of scientists' perceptions of and behavior in adopting open access publishing as well as of the measurement scales. Open access publishers and research libraries may also use the results as guidelines in promoting open access publishing and evaluating open access journals respectively.

Scholars can use these results to extend knowledge of each of the factors investigated and a number of additional factors that were identified in different settings incorporating moderators, mediators, and additional controls employing longitudinal designs. Particularly compelling is the need for future research on the influence of these factors in different stages of the adoption process and in different phases of the diffusion process. Practitioners can use these findings to assess the potential for successful adoption of the magnet concept by their hospitals and to better plan their strategy for addressing persistent workforce shortages.

This study analyzes the factors influencing the adoption of Intelligent Transportation Systems (ITS) technologies in the U.S. amongst state and local transportation agencies. Using data from the ITS Deployment Tracking survey, insight is provided on how economic and demographic factors influence ITS adoption/deployment, the role safety or mobility problems play in the decision to adopt/deploy ITS technologies, and how policy can affect ITS adoption/deployment. In addition, this study examines the historical adoption patterns of ITS technologies as they entered the market place. Results indicate ITS markets are primarily made up of imitators (as opposed to innovators) and at the aggregate level the markets examined are mature. Key factors affecting the adoption and deployment of ITS include agency funding levels and the presence of a regional architecture. Based on these results, policy recommendations are presented on how best the USDOT might target its efforts to influence the pattern of ITS adoption.

"This study aims to examine the factors and issues in adoption of smart wearable devices. Wearable devices have many functions to offer which make them very useful in our daily lives. However, factors influencing the adoption of these devices are not well understood. This research explores the inhibiting and contributing factors influencing the adoption of wearable devices by employing the laddering approach. Qualitative data were collected through in-depth interviews using the laddering technique in order to understand these factors. Wearable devices that were examined include the Smart Glass (Google Glass) and the Smart Watch (Sony Smart Watch 3). After the participants had the opportunity to try out these two devices, the factors that are most important to them in deciding whether to adopt or not to adopt these devices were ladderred. The use of the laddering technique with the Means-End Chain approach not only offers a greater understanding of the factors influencing the adoption of wearable devices, but also reveal the relationships among these factors and any meaningful associations with self (i.e., the user). This research has advanced our understanding on the adoption of wearable devices and provide some insights into the key design criteria to better fit users' needs"--Abstract, page iii.

Master's Thesis from the year 2020 in the subject Business economics - Banking, Stock Exchanges, Insurance, Accounting, , language: English, abstract: The main objective of this study is to identify the major factors influencing the adoption of Interest free banking products and services among customers in Bale Robe town. The research employs decomposed theory of planned behavior to investigate the influence of customer's behavior towards adoption of interest-free banking product and services by using customers attitude attribute social influence and perceived behavioral control. Both qualitative

Where To Download Factors Influencing The Adoption Of E Services In Malaysia

and quantitative research approach were applied in the study. The target populations were 13050 customers of four banks in Robe town and the total sample size were 388. A purposive sampling technique was applied. Primary and secondary data were used with five point liker scales to collect data from respondents. Both descriptive and inferential statistics analysis were employed to analyze the data. Interest free banking is inseparable of Islamic economics which aimed at realization of a greater justice in human endeavor, which is achievable only with participation of all human institution inclusive of financial system. On the principle that prohibits interest and other unethical and non shariah compliant activities, Islamic banking set to achieve this gigantic objective. In addition, it strive on increasing all Halal aspect of business through provision of products and services base on shariah principle with implementation of legitimate profit and loss sharing, paying Zakah, prohibition of interest, monopoly and other forms of unethical trade and transaction such as dealing with pork, alcohol and gambling. Hence, Islamic banking method of financing and or products structure is based on the tract to redress the inherent injustice tied with interest based dealing.
