Providing a comprehensive and systematic commentary on the nature of overlapping Intellectual Property rights and their place in practice, this book is a major contribution to the way that IP is understood. IP rights are mostly studied in isolation, yet in practice each of the legal categories created to protect IP rights will usually only provide partial legal coverage of the broader context in which such rights are actually created, used, and enforced. Consequently, often multiple IP rights may overlap, in whole or in part, with respect to the same underlying subject matter. Some patterns, for instance, in addition to being protected from copying under the design rights regime, may also be distinctive enough to warrant trade mark protection. Each chapter addresses a discrete pair of IP rights and is written by a specialist in that area. Facilitating an understanding of how and when those rights may be encountered in practice, each chapter is introduced by a hypothetical situation setting out the overlap discussed in the chapter. The conceptual and practical issues arising from this situation are then discussed, providing practitioners

with a full understanding of the overlap. Also included is a valuable summary table setting out the legal position for each set of overlapping rights in jurisdictions across Europe, Central and South America, and Asia, and the differences between them.

This book offers the first detailed analysis of China and the U.S. insider trading law, explaining what constitutes insider trading in China and what the consequences of unlawful insider trading might be there. More importantly, it suggests ways in which the law might more effectively prevent the occurrence of insider trading in the first place. Among the elements of the legal framework addressed by the author are the following: and Who benefits from insider trading and The issue of when information becomes public and A comparative law treatment of the underlying theories of insider trading liability and Private civil liability and Damage caps and Measures of recovery The author and his approach focuses on China and the U.S. readiness to adopt foreign ideas without adequately assimilating them into the local context. In this connection, he sets out valuable reform proposals, using authority from field interviews with Chinese stakeholders as well as from comparative case law.

The International Corporate 1000 represents a joint venture between Monitor Publishing Company of Washington, DC, and Graham & Trotman Limited of London. Monitor Publishing Company is well known as the publisher of The Federal Yellow Book, The Congressional Yellow Book, and The Corporate 1000. Graham & Trotman's annual directories providing data on the major companies in many parts of the world are equally established. The two publishing companies have pooled their expertise in this joint venture to research, compile and publish The International Corporate 1000, A Directory of Who Runs The World's 1000 Leading Corporations. The directory was designed to help you identify and contact the senior executives

who lead and manage these companies. Accordingly, you will find extensive, valuable detail about who does what, and how to reach them, but you will find little financial or statistical data. We have designed the book in this way because we believe there is a great need for an accurate and current executive directory, whereas a wealth of financial data is already available from many different sources. The organization of the directory is by key geographical region, then by major country within each region, and then alphabetically by company within each country.

Programming for the Newton: Software Development with NewtonScript focuses on the processes, approaches, operations, and principles involved in software development with NewtonScript. The publication first elaborates on Newton application design, views on the Newton, and protos. Discussions focus on system protos, creating and using user protos, linking and naming templates, creating the views of WaiterHelper, Newton application designs, and life cycle of an application. The text then elaborates on the fundamentals of NewtonScript, inheritance in NewtonScript, and view system and messages. Topics include InstallScript and RemoveScript, adding code to WaiterHelper, proto and parent inheritance, combining proto and parent inheritance, frames, arrays, and symbols and path expressions. The book ponders on debugging and Newton data storage, including description of methods and functions, handling soups in application, printing, tracking, and debugging functions. The publication is a vital reference for computer programmers and researchers interested in NewtonScript.
