The author is from the Institute of Development Studies at the University of Zimbabwe. He examines the paradox ensuing from the Lancaster House Settlement at Zimbabwe's independence, that whilst colonial rule was ended, the framework was provided for continued white privilege, on the basis of control of the economy by this elite - and through them, transnational capital. He analyses the responses of the ruling (including official) elite, the black petty bourgeoisie, and the group associated with the former Rhodesian Front.

GCE O Level Examination Past Papers with Answer Guides: English Language

Much attention in late-developing countries is given to providing access to studies which allow school leavers to enter science and technology-related careers. This book reviews research related to the crucial dimension of epistemological access to the disciplines of import, which students need as much as institutional access in order to improve their chances of success. A significant feature of this collection's research studies is that their empirical bases are highly localised, covering areas such as research methods, access, curriculum, instruction and assessment, and the relevance of science and mathematics education in Zimbabwe, Uganda, Swaziland, South Africa, Namibia, Malawi, Ghana and Lesotho. It is the outcome of a doctoral research capacity-development project, the Graduate Studies in Science, Mathematics and Technology Education (GRASSMATE).

The book represents a contribution to policy formulation and design in an increasingly knowledge economy in Zimbabwe. It challenges scholars to think about the role of education, its funding and the egalitarian approach to widening access to education. The nexus between education, democracy and policy change is a complex one. The book provides an illuminating account of the constantly evolving notions of national identity, language and citizenship from the Zimbabwean experience. The book discusses educational successes and challenges by examining the ideological effects of social, political and economic considerations on Zimbabwe's colonial and postcolonial education. Currently, literature on current educational challenges in Zimbabwe is lacking and there is very little published material on these ideological effects on educational development in Zimbabwe. This book is likely to be one of the first on the impact of social, political and economic meltdown on education. The book is targeted at local and international academics and scholars of history of education and comparative education, scholars of international education and development, undergraduate and graduate students, and professors who are interested in educational development in Africa, particularly Zimbabwe. Notwithstanding, the book is a valuable resource to policy makers, educational administrators and researchers and the wider community. Shizha and Kariwo's book is an important and illuminating addition on the effects of social, political and economic trajectories on education and development in Zimbabwe. It critically analyses the crucial specifics of the Zimbabwean situation by providing an in depth discourse on education at this historical juncture. The book offers new insights that may be useful for an understanding of not only the Zimbabwean case, but also education in other African countries. Rosemary Gordon, Senior Lecturer in Educational Foundations, University of Zimbabwe Ranging in temporal scope from the colonial era and its elitist legacy through the golden era of populist, universal elementary education to the disarray of contemporary socioeconomic crisis; covering elementary through higher education and touching thematically on everything from the pernicious effects of social adjustment programmes through the local deprofessionalization of teaching, this text provides a comprehensive, wide ranging and yet carefully detailed account of education in Zimbabwe. This engagingly written portrayal will prove illuminating not only to readers interested in Zimbabwe's education specifically but more widely to all who are interested in how the sociopolitical shapes education- how ideology, policy, international pressures, economic factors and shifts in values collectively forge the historical and contemporary character of a country's education. Handel Kashope Wright, Professor of Education, University of British Columbia

In recent years, the Zimbabwe crisis rendered the country and its citizens to be a typical case of 'failed states', the world over. Zimbabwean society was and is still confronted with different challenges which include political, economic and social problems. Attempts to overcome these challenges have thrown light on the power that rests within individuals and or groups to change and even revolutionize their localities, communities, states and ultimately the world at large. Through experience, individuals and groups have promoted ideas that have aided in changing mentalities, attitudes and behaviors in societies at different levels. This book brings together contributors from various academic disciplines to reflect on and theorize the contours of power, including the intrinsic and or extrinsic models of power, which pertain to individuals, communities, and or groups in order to transform society. Reflections are on various groups such as political movements, environmental movements, religious groups, advocacy groups, gender groups, to mention but a few, as they struggle against marginalization, discrimination, exploitation, and other forms of oppression showing their agency or compliance.

The role of education in human well being and social development cannot be overestimated. After a number of highly commendable policies on education in the first decade of independence, the education system in Zimbabwe has taken a tumble that needs both examining and rectifying. This volume analyses the challenges facing the education system in Zimbabwe and explores and scrutinises theoretical and practical possibilities for restoring the educational dream that was initiated at independence in 1980. The book is targeted at academics, scholars, college and university students, policy makers and other stakeholders and advocates a multi-pronged approach that must involve all stakeholders if educational retransformation, reconstruction and restoration are to be achieved. The authors provide a range of recommendations for a project that would restore the educational dream in Zimbabwe.

Each volume in the 7-volume series The World of Science Education reviews research in a key region of the world. These regions include North America, South and Latin America, Asia, Australia and New Zealand, Europe and Israel, North Africa and the Middle East, and Sub-Saharan Africa. The focus of this Handbook is on research in science education in mostly former British colonies in Sub-Saharan Africa and the scholarship that most closely support this program. The reviews of the research situate what has been accomplished within a given field in Sub-Saharan Africa rather than an international context. The purpose therefore is to articulate and exhibit regional networks and trends that produced specific forms of science education. The thrust lies in identifying the roots of research programs and sketching trajectories – focusing the changing façade of problems and solutions within regional contexts. The approach allows readers to review what has been done and accomplished, what is missing and what might be done next.

This Handbook presents an international collection of essays examining history education past and present. Framing recent curriculum reforming in Canada and in the United States in light of a century-long debate between the relationship between theory and practice, this collection contextualizes the debate by exploring the evolution of history and social studies education within their state or national contexts. With contributions ranging from Canada, Finland, New Zealand, Sweden, the Netherlands, the Republic of South Africa, the United Kingdom, and the United States, chapters illuminate the ways in which curriculum theorists and academic researchers are working with curriculum developers and educators to translate and refine notions of historical thinking or inquiry as well as pedagogical practice.

Emerging work of the pioneering work of the African Association for History Education (AAHE-Afrika), Teaching African History in Schools offers an original Africa-centred contribution to existing research and debates in the international field of history education.

The diamond fields of Chiadzwa, among the world's largest sources of rough diamonds have been at the centre of struggles for power in Zimbabwe since their discovery in 2006. Against the backdrop of a turbulent political economy, control of Chiadzwa's diamonds was hotly contested. By 2007 a new case of blood diamonds had emerged, in which the country's security forces engaged with informal miners and black market dealers in the exploitation of rough diamonds, violently disrupting local communities and looting a key national resource. The formalisation of diamond mining in 2010 introduced new forms of large-scale theft, displacement and rights abuses. Facets of Power is the first comprehensive account of the emergence, meaning and profound impact of Chiadzwa's diamonds. Drawing on new fieldwork and published sources, the contributors present a graphic and accessibly written narrative of corruption and greed, as well as resistance by those who have suffered at the hands of the mineral's secretive and violent beneficiaries. If the lessons of resistance have been mostly disheartening ones, they also point towards more effective strategies for managing public resources, and mounting democratic challenges to elites whose power is sustained by preying on them.
