Chapter 32 - Plant Nutrition and Transport - Biology 152 ...

Plant nutrition studies the chemicals necessary for plant growth. Transport studies the regulation and movement of these molecules from the external environment into the necessary areas of the plant structure.

Plant Nutrition & Transport - Biology | Socratic

Plants can absorb inorganic nutrients and water through their root system, and carbon dioxide from the environment. The combination of organic compounds, along with water, carbon dioxide, and sunlight, produce the energy that allows plants to grow. Inorganic compounds form the majority of the soil solution. Plants access water though the soil.
