phase starts when a system requirement arises and the phase searches for a potential solution. The definition for the need and solutions is laid down for further evaluation. In the preliminary System Design phase, the life-cycle of the system is designed and its related sub-systems are formulated along with the functional layouts.

sufficient for full
evaluation.

Engineering design process - Wikipedia

The conceptual design is exactly what it says - a concept. You have a concept and flesh it out a little - maybe do some preliminary sizing calculations. This allows a rough cost estimate to be done (say, $\pm 30@50\%$), and the concept can then be compared with
