Construction Staking, also known as a Site Layout Survey, is the process of interpreting construction plans and marking the location of proposed new structures such as roads or buildings. Construction staking is performed to ensure a project is built according to engineering design plans.

### Construction Staking and Site Layout Surveys

Dimensions are placed on the floor plan as shown in Figure 6-34. Note that the dimension lines are drafted lighter than wall lines and are generally done as a continuous group or string of numbers along a line. The extension line begins slightly away from the object (a minimum of  $\frac{1}{16}$  inch or 1.58 mm), never touching it.

3-D laser scanners are the most expensive and technically sophisticated surveying tools. Imagine using a conventional total station or theodolite to layout 10 or 15 points for a project. Now imagine setting up a 3-D laser scanner, which looks very much like a robotic total station, and recording a million points in a few minutes.
