Nuclear transmutation is the conversion of one chemical element or an isotope into another chemical element. Because any element (or isotope of one) is defined by its number of protons (and neutrons) in its atoms, i.e. in the atomic nucleus, nuclear transmutation occurs in any process where the number of protons or neutrons in the nucleus is changed.. A transmutation can be achieved either by ...

fusion nuclear effects work in the U.S., that seems unlikely. In any case, the tendency to zero in on fusion reactions as the probable source of the cold fission effect must be revisited.
